A Motor Function Measure Scale
MFM, Motor Function Measure, is a myopathy scale to measure the functional motor abilities affected by a neuromuscular disease. Some motor function tests can specify the evolution of neuromuscular disorder or muscular dystrophy.

A motor function measure scale for neuromuscular diseases. Construction and validation study Carole Be´rard a, *, Christine Payan b, Isabelle Hodgkinson a, Jacques Fermanian c,

A motor function measure scale for neuromuscular diseases ...
Gross Motor Function Measure. The scoring system of the GMFM is a four-point scale divided into five categories (lying and rolling; sitting; crawling and kneeling; standing; walking, running). Specific descriptors for scoring items are detailed in the administration and scoring guidelines. A 5-year old child without motor disabilities is able to reach the maximum score 1.

Publications. MFM, Motor Function Measure, is a myopathy scale to measure the functional motor abilities affected by a neuromuscular disease. Some motor function tests can specify the evolution of neuromuscular disorder or muscular dystrophy.

Publications - MFM, Motor Function Mesure and scale
Background/aim: The Motor Function Measure (MFM-32) is a classification system for ambulant and nonambulant patients with neuromuscular diseases (NMDs).

Motor function measure scale: Portuguese version and ...©Mac K eith Pr s, 20 The GMFM is a standardized observational instrument designed and validated to measure change in gross motor function over time in children with cerebral palsy.

GROSS MOTOR FUNCTION MEASURE (GMFM) SCORE SHEET (GMFM-88 ...Key Descriptions. 8 items that assess 8 areas of motor function Patients perform each task 3 times, only the best performance is recorded Items (with the exception of the general tonus item*) are assessed using a 7-point scale (0 to 6)

Motor Assessment Scale | RehabMeasures Database
The Gross Motor Function Measure (GMFM) is a clinical tool designed to evaluate change in gross motor function in children with cerebral palsy. There are two versions of the GMFM - the original 88-item measure (GMFM-88) and the more recent 66-item GMFM (GMFM-66).

Gross Motor Function Measure (GMFM) - CanChild
This test is designed to assess the return of function following a stroke or other neurological impairment. The test looks at a patient’s The test looks at a patient’s ability to move with low tone or in a synergistic pattern and finally move actively out of that pattern into normal movement.

Motor Assessment Scale - Physiopedia
The GMFM is a standardized observational instrument designed and validated to measure change in gross motor function over time in children with cerebral palsy. The scoring key is meant to be a general guideline.

GMFM-88 and 66 Score Sheet - CanChild
The gross motor function of children and young people with cerebral palsy can be categorised into 5 different levels using a tool called the Gross Motor Function Classification System Expanded and Revised(GMFCS – E&R).

Gross Motor Function Classification System (GMFCS ...Type of Measure: The Gross Motor Function Classification System (GMFCS) is a 5 level classification
system that describes the gross motor function of children and youth with cerebral palsy on the basis of their self-initiated movement with particular emphasis on sitting, walking, and wheeled mobility.

The Motor Function Measure MFM-32 & MFM-20 A measurement scale for neuromuscular diseases
The Motor Function Measure (MFM) is a generic scale which provides a measurement of the effects of muscle weakness in neuromuscular diseases (NMD). Assessments are based on posture and movements of the whole body.
